

QUICK START MANUAL OF MODBUS RTU ENCODER

## DEVICE CONNECTION

### Cable Connection

## DEVICE CONNECTION

### Encoder Setting

#### Pin Definition

#### Default Setting

- Baud rate: 19200
- Even parity check
- 1 stop bit

#### Connection Plan

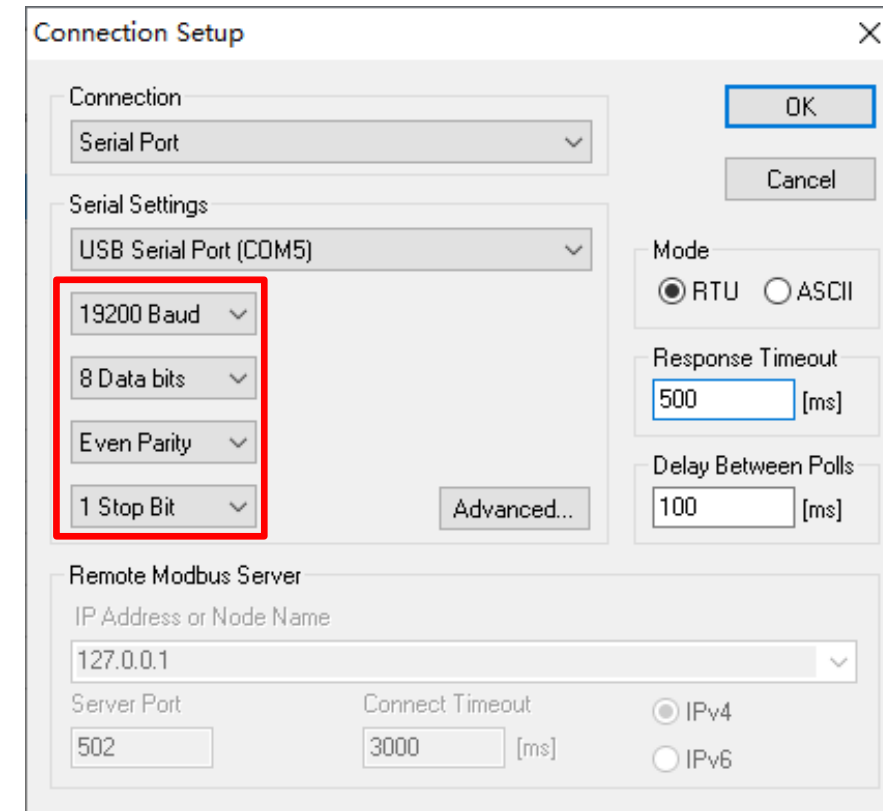

SIGNAL	PIN NUMBER
Power Supply	2
GND	3
RS485 A +	4
RS485 B -	5
Signal GND	1

- Slave ID: 7Fh(127d)
- 8 data bits.

## COMMUNICATION SETTING

➤ Register Address = A + B

➤ Press F3 to make connection setup. If it is the first time to use, select it according to the original settings.

## COMMUNICATION SETTING

Register	Data name	Order	Attribute	Value	Default
40002	Position	MSB	RO	Position Value Bit 17-32	
40003	Position	LSB	RO	Position Value Bit 1-16	
40004	Actual Reverse State	MSB	RO	Actual State CW = 0, CCW = 1	0
40005	Term Rest State	MSB	RO	Termination on = 1, off = 0	1
40006	Speed	MSB	RO	Speed Value Bit 17-32	
40007	Speed	LSB	RO	Speed Value Bit 1-16	
40008	Limit switch state		RO		

- Press F8 to make read/write definition. The original slave ID is 127. According to register list, choosing Address and Quantity.

- Address: The first register address you need to view.
- Quantity: The number of continuous registers you need to view.

For example: If you want to check the position data.

- Address: Protocol address. E.g. 40011→10.  
So Position Register address 40002 should be reduced 40001 = 1.
- Quantity blank should be filled 2.
- Note: If the register being queried is not in use, an error is reported.

## REGISTER DESCRIPTION

### Register 0 - 19

Register	Alias	Value
0		00000
1	Position Value Bit 17-32 (RO)	0
2	Position Value Bit 1-16 (RO)	1440
3	Actual State CW=0, CCW=1 (RO)	0
4	Termination on=1, off=0 (RO)	1
5	Speed Value Bit 17-32 (RO)	0
6	Speed Value Bit 1-16 (RO)	0
7	Limit Switch State (RO)	0
8		

For Help, press F1. Port 5: 19200-8-E-1

Register	Alias	Value
0		00010
1		
2	Physical ST Resolution Bit 17-32 (RO)	0
3	Physical ST Resolution Bit 1-16 (RO)	8192
4	Physical MT Resolution Bit 17-32 (RO)	0
5	Physical MT Resolution Bit 1-16 (RO)	4096
6	Scaling Enabled (RW)	1
7	ST Resolution Bit 17-32 (RW)	0
8	ST Resolution Bit 1-16 (RW)	4096
9	Total Resolution Bit 17-32 (RW)	0

**Remark:**

- > RO: Read only, not modifiable.
- > RW: Read and write.

## REGISTER DESCRIPTION

### Register 20 - 32

Register	Alias	Value
0	Total Resolution Bit 1-16 (RW)	16384
1	Preset Bit 17-32 (RW)	0
2	Preset Bit 1-16 (RW)	0
3	Offset Bit 17-32 (RO)	0
4	Offset Bit 1-16 (RO)	6420
5	Count Direction (RW)	0
6	Speed Mode (RW)	0
7	Speed Filter (RW)	0
8	Limit Switch Enable (RW)	0
9	Limit Switch Low Bit 17-32 (RW)	0

For Help, press F1. Port 5: 19200-8-E-1

Register	Alias	Value
0	Limit Switch Low Bit 1-16 (RW)	0
1	Limit Switch High Bit 17-32 (RW)	0
2	Limit Switch High Bit 1-16 (RW)	0
3		
4		
5		
6		
7		
8		
9		

For Help, press F1. Port 5: 19200-8-E-1

**Remark:**

- > RO: Read only, not modifiable.
- > RW: Read and write.

## REGISTER DESCRIPTION

### Register 256 - 262

Modbus Poll - Mbpoll1

File Edit Connection Setup Functions Display View Window Help

05 06 15 16 17 22 23 TC ? ?

Mbpoll1

Tx = 98: Err = 0: ID = 127: F = 03: SR = 1000ms

	Alias	00250

## ENCODER CONFIGURATION

### Position Preset

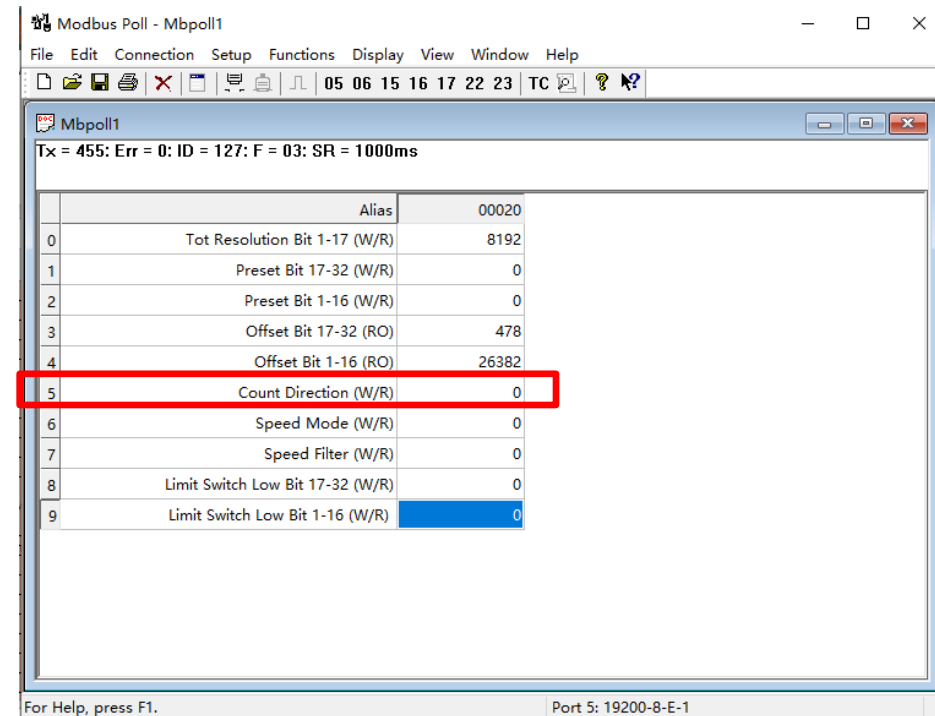

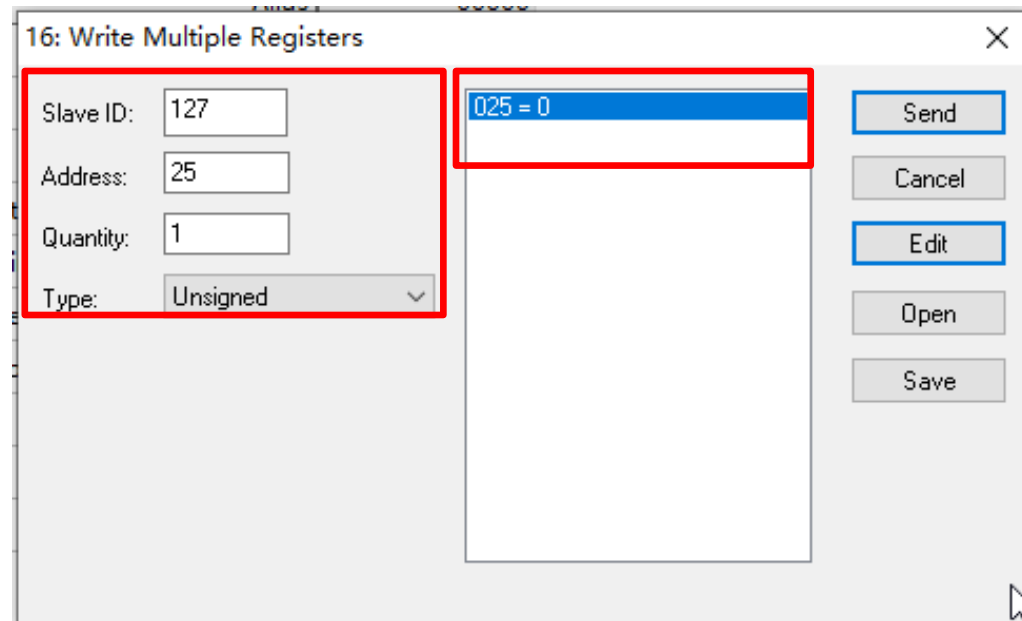

- Press Alt + F8 to write multiple registers.
- Filling in "Slave ID", "Address", "Quantity" and "Type".
- Set the corresponding register data.
- Press "Send".

- According to the figure above, we can find:
- Register Address of preset are 21 and 22.
- Address should be filled in 21.
- Quantity should be filled in 2.

## ENCODER CONFIGURATION

### Direction Setting

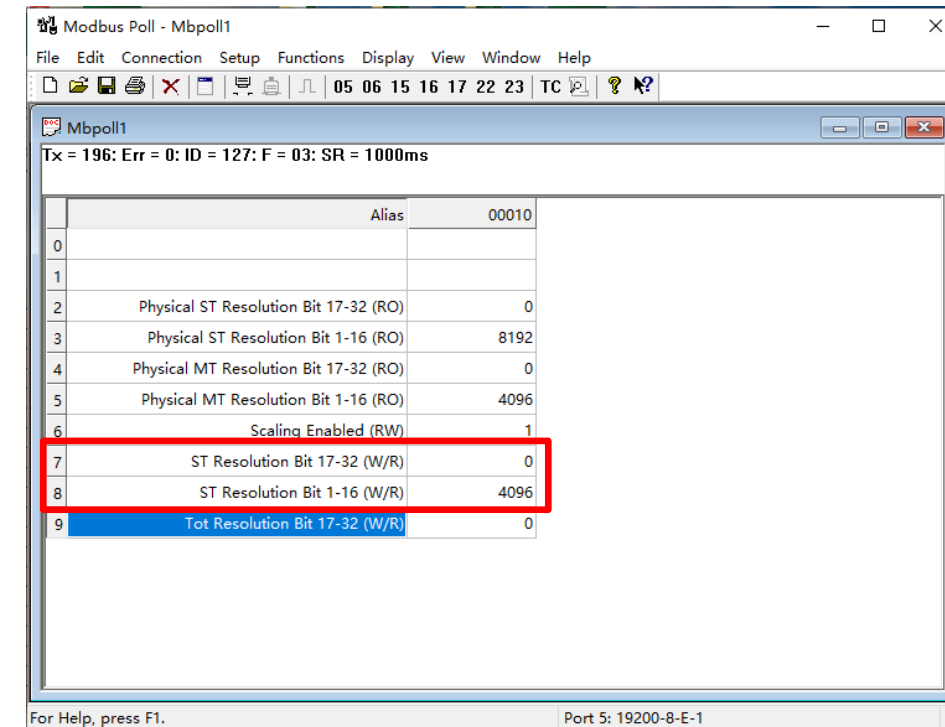

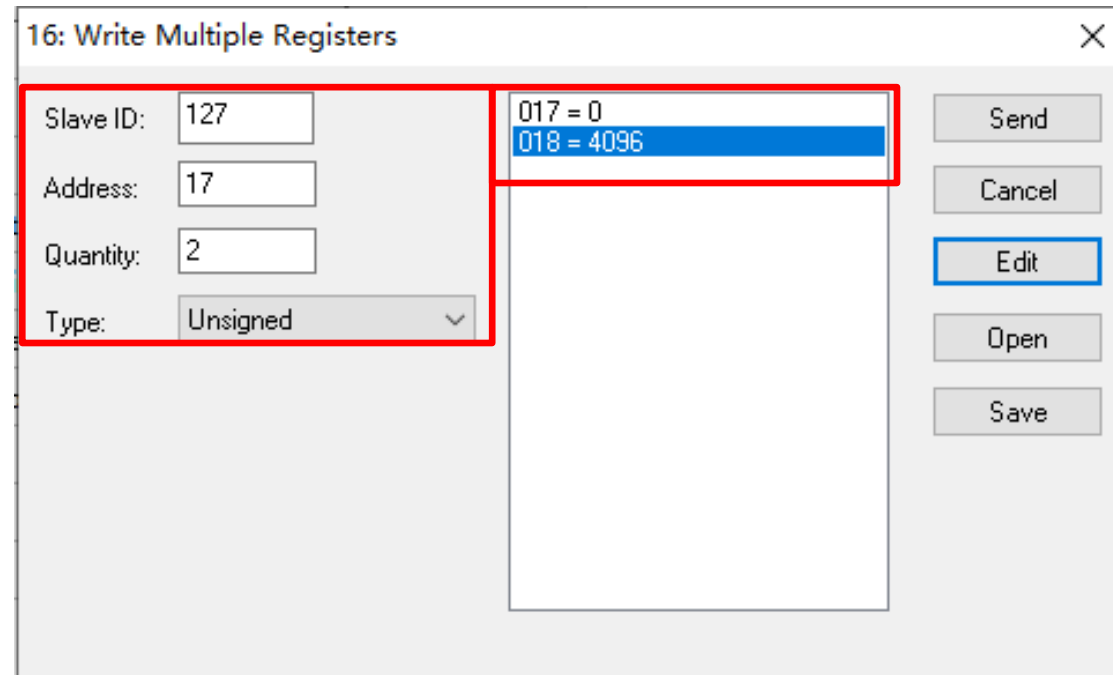

- Press Alt + F8 to write multiple registers.
- Filling in “Slave ID”, “Address”, “Quantity” and “Type”.
- Set the corresponding register data.
- Press “Send”.

- According to the figure above, we can find:
- Register address of count direction is 25.
- Address should be filled in 25.
- Quantity should be filled in 1.

## ENCODER CONFIGURATION

### ST Resolution Setting

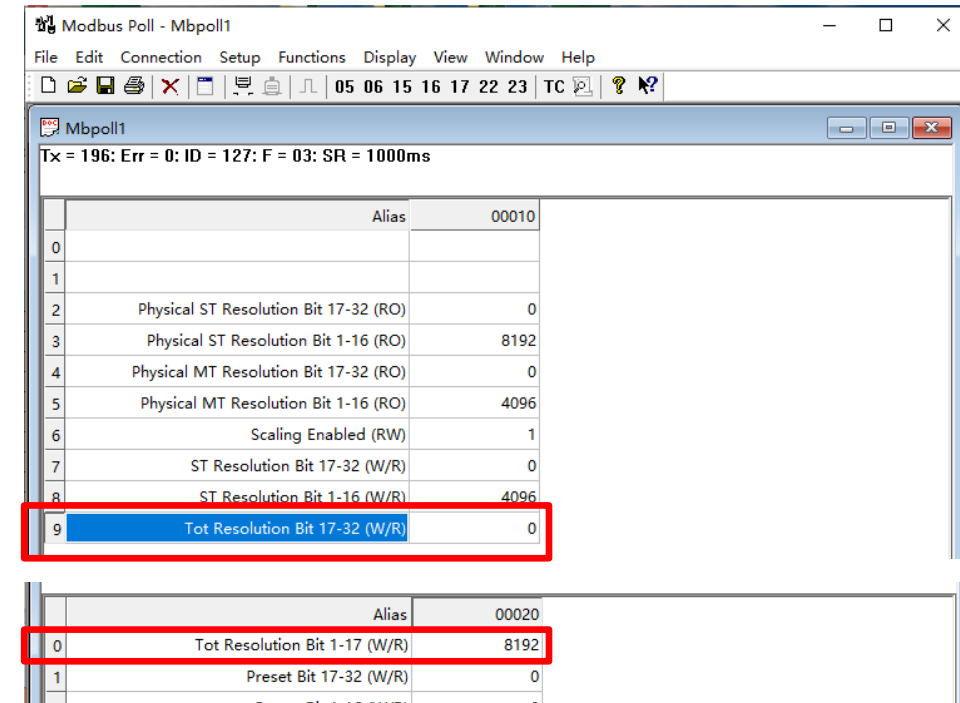

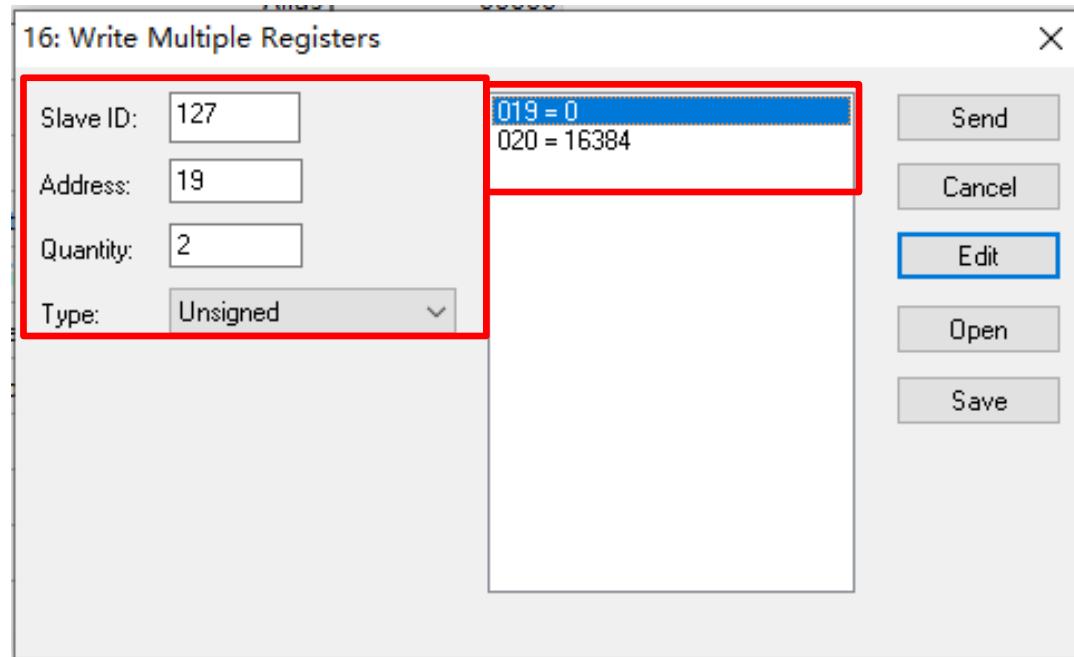

- Press Alt + F8 to write multiple registers.
- Filling in "Slave ID", "Address", "Quantity" and "Type".
- Set the corresponding register data.
- Press "Send".

- According to the figure above, we can find:
- Register address of ST resolution setting are 17 and 18.
- Address should be filled in 17.
- Quantity should be filled in 2.

## ENCODER CONFIGURATION

### Total Resolution Setting

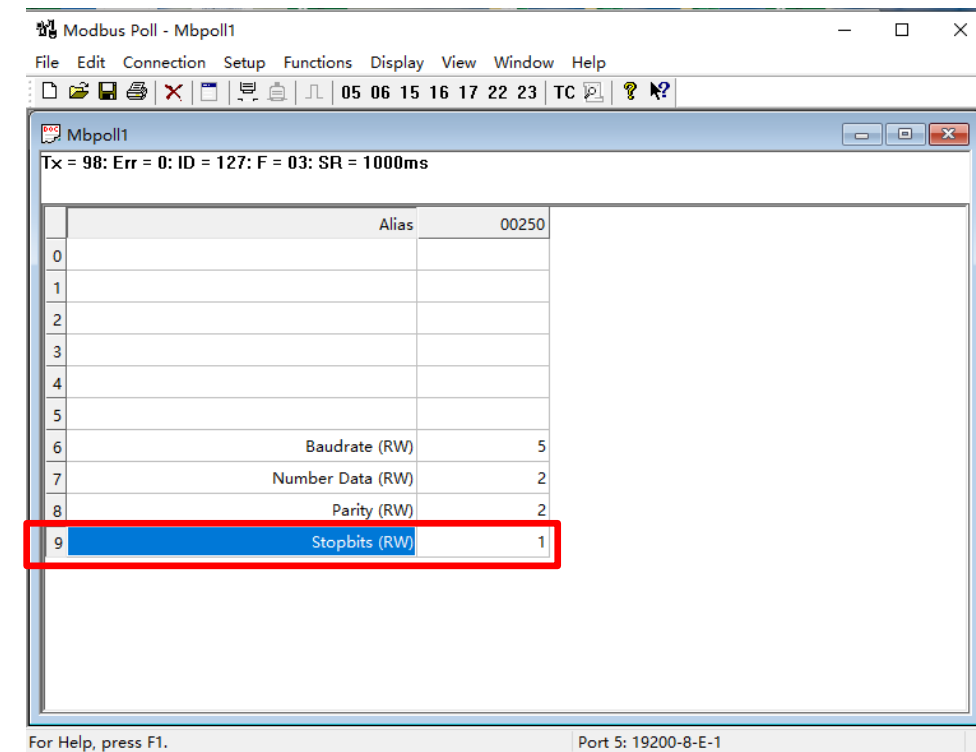

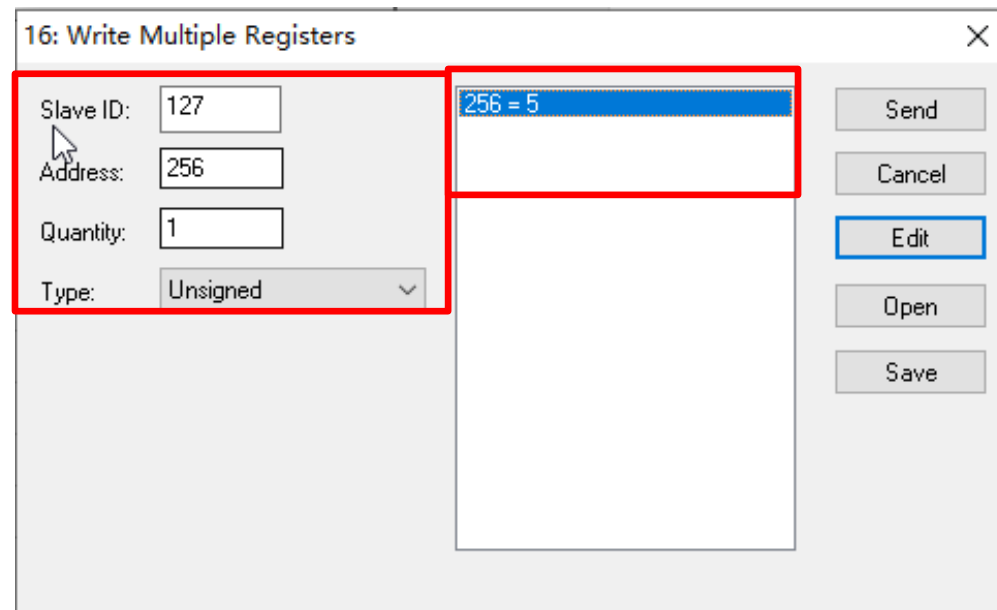

- Press Alt + F8 to write multiple registers.
- Filling in “Slave ID”, “Address”, “Quantity” and “Type”.
- Set the corresponding register data.
- Press “Send”.

- According to the figure above, we can find:
- Register address of total resolution setting are 19 and 20.
- Address should be filled in 19.
- Quantity should be filled in 2.

## ENCODER CONFIGURATION

### Baud Rate Setting

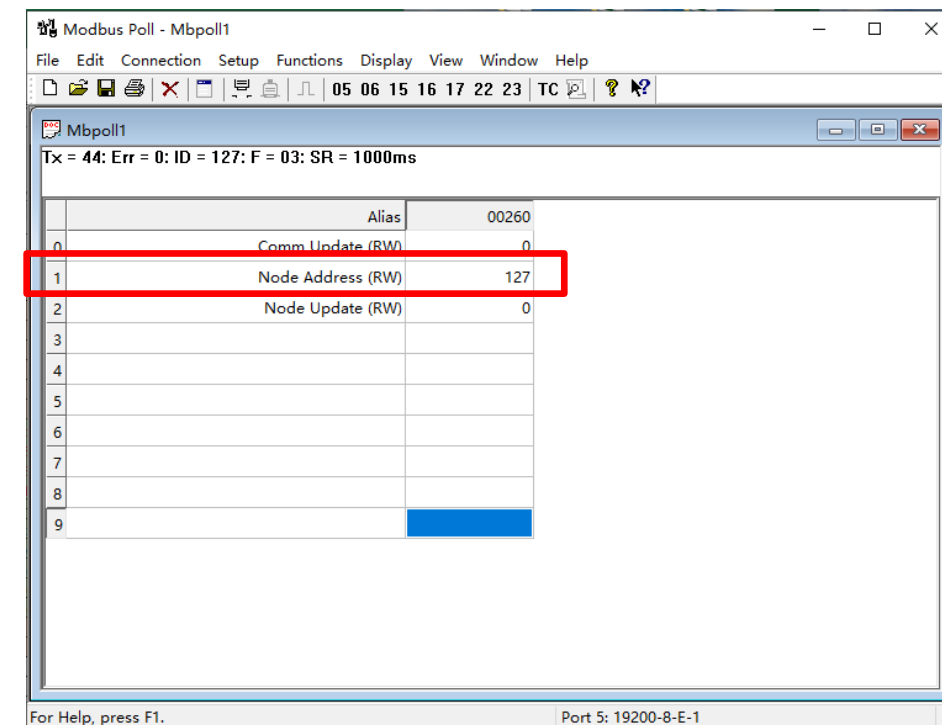

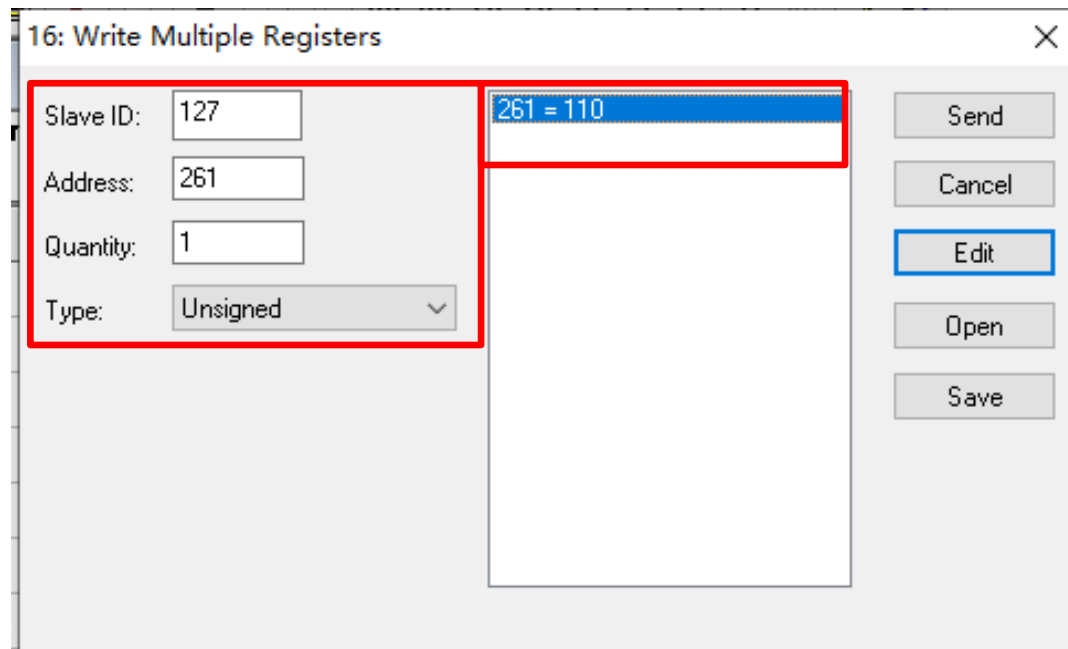

- > Press Alt + F8 to write multiple registers.
- > Filling in “Slave ID”, “Address”, “Quantity” and “Type”.
- > Set the corresponding register data.
- > Press “Send”.
- > Baud rate: 0=1200, 1=2400, 2=4800, 3=9600, 4=14400, 5=19200, 6=38400, 7=56000, 8=57600, 9=115200, 10=128000, 11=256000
- > Power off and reconnect at the new baud rate after setting.

- > According to the figure above, we can find:
- > Register Address of baud rate is 256.
- > Address should be filled in 256.
- > Quantity should be filled in .

## ENCODER CONFIGURATION

### Slave ID Setting

- Press Alt + F8 to write multiple registers.
- Filling in "Slave ID", "Address", "Quantity" and "Type".
- Set the corresponding register data.
- Press "Send".
- Power off and reconnect at the Slave ID after setting.

- According to the figure above, we can find:
- Register Address of node address is 261.
- Address should be filled in 261.
- Quantity should be filled in 1.

THANK YOU FOR YOUR ATTENTION!
